

E-FIGURE 64-1 Pigmentation in Addison's disease. **A**, Hands of an 18-year-old woman with autoimmune polyendocrine syndrome and Addison's disease. Pigmentation in a patient with Addison's disease before (**B**) and after (**C**) treatment with hydrocortisone and fluorocortisone. Notice the additional presence of vitiligo. **D**, Similar changes are also seen in a 60-year-old man with tuberculous Addison's disease before and after corticosteroid therapy. **E**, Buccal pigmentation in the same patient as in **D**.
