

FIGURE 441e-7 Candidiasis in a newborn (**Chap. 240**). Axial T2-weighted MRI (**A**) demonstrates multiple punctate foci of low signal diffusely distributed in the brain parenchyma (*arrowhead*). Axial T1-weighted MRIs postgadolinium (**B, C**) demonstrate marked enhancement of the lesions (*arrowheads*). Apparent diffusion coefficient (ADC) map (**D, E**) demonstrates restricted diffusion of water molecules in the lesions (*arrowheads*).
