

FIGURE 76e-9 Lichen planus, with multiple flat-topped, violaceous papules and plaques. Nail dystrophy, as seen in this patient's thumb-nail, may also be a feature. (Courtesy of Robert Swerlick, MD; with permission.)

FIGURE 76e-11 Vitiligo in a typical acral distribution, with striking cutaneous depigmentation as a result of melanocyte loss.

FIGURE 76e-10 Seborrheic keratoses are "stuck on," waxy, verrucous papules and plaques with a variety of colors ranging from light tan to black.

FIGURE 76e-12 Alopecia areata, characterized by a sharply demarcated circular patch of scalp completely devoid of hairs. Preservation of follicular orifices is indicative of nonscarring alopecia. (Courtesy of Robert Swerlick, MD; with permission.)

FIGURE 76e-13 Pityriasis rosea. Multiple round or oval erythematous patches with fine central scale are distributed along the skin tension lines on the trunk.
