

Acknowledgments

First and foremost we wish to express our respects and deep gratitude to the late Dr. Nelson Fausto for having been the coeditor of the last two editions of this book. Many of his words are retained in this edition and will continue to benefit future readers. He shall be greatly missed.

All three of us offer thanks to our contributing authors for their commitment to this textbook. Many are veterans of previous editions; others are new to the ninth edition. All are acknowledged in the table of contents. Their names lend authority to this book, for which we are grateful. As in previous editions, the three of us have chosen not to add our own names to the chapters we have been responsible for writing, in part or whole.

Many colleagues have enhanced the text by reading various chapters and providing helpful critiques in their area of expertise. They include Drs. Seungmin Hwang, Kay McLeod, Megan Mc Nerney, Ivan Moskovitz, Jeremy Segal, Humaira Syed, Helen Te, and Shu-Yuan Xiao at the University of Chicago; Marcus Peter at Northwestern University, Chicago; Dr Meenakshi Jolly at Rush University, Chicago; Drs. Kimberley Evason, Kuang-Yu Jen, Richard Jordan, Marta Margeta, and Zoltan Laszik at the University of California, San Francisco; Dr. Antony Rosen at Johns Hopkins University; Dr. Lundy Braun at Brown University; Dr. Peter Byers at the University of Washington; Drs. Frank Bunn, Glenn Dranoff, and John Luckey at Harvard Medical School; Dr. Richard H. Aster at the Milwaukee Blood Center and Medical College of Wisconsin; and Dr. Richard C. Aster at Colorado State University. Special thanks are due to Dr. Raminder Kumar for updating clinical information and extensive proofreading of many chapters in addition to her role as consulting clinical editor for several chapters. Many colleagues provided photographic gems from their collections. They are individually acknowledged in the text.

Our administrative staff needs special mention since they maintain order in the chaotic lives of the authors and have willingly chipped in when needed for multiple tasks relating to the text. At the University of Chicago, they include Ms. Nhu Trinh and Ms. Garcia Wilson; at the University of California at San Francisco, Ms. Ana Narvaez; and at the Brigham and Women's Hospital, Muriel Goutas. All of the graphic art in this book was created by Mr. James Perkins, Professor of Medical Illustration at Rochester Institute of Technology. His ability to convert complex ideas into simple and aesthetically pleasing sketches has considerably enhanced this book.

Many individuals associated with our publisher, Elsevier (under the imprint of WB Saunders), need our special thanks. Outstanding among them is Jennifer Nemeč, Project Manager, and our partner in the production of this book. Her understanding of the needs of the authors, promptness in responding to requests (both reasonable and unreasonable), and cheerful demeanor went a long way in reducing our stress and making our lives less complicated. Mr. William (Bill) Schmitt, Publishing Director of Medical Textbooks, has always been our cheerleader and is now a dear friend. Our thanks also go to Managing Editor Rebecca Gruliow and Design Manager Lou Forgione at Elsevier. Undoubtedly there are many others who may have been left out unwittingly—to them we say “thank you” and tender apologies for not acknowledging you individually.

Efforts of this magnitude take a toll on the families of the authors. We thank our spouses, Raminder Kumar, Ann Abbas, and Erin Malone for their patience, love, and support of this venture, and for their tolerance of our absences.
