

Diseases of the Immune System

CHAPTER CONTENTS

- The Normal Immune Response 186**
- Innate Immunity 186**
- Components of Innate Immunity 186
 - Cellular Receptors for Microbes, Products of Damaged Cells, and Foreign Substances 187
 - Reactions of Innate Immunity 188
- Adaptive Immunity 188**
- Cells of the Immune System 189**
- Lymphocyte Diversity 190
 - T Lymphocytes 190
 - B Lymphocytes 191
 - Dendritic Cells 191
 - Macrophages 192
 - Natural Killer Cells 192
 - Innate Lymphoid Cells (ILCs) 193
- Tissues of the Immune System 193**
- Generative Lymphoid Organs 193
 - Peripheral Lymphoid Organs 193
 - Lymphocyte Recirculation 194
- Major Histocompatibility Complex (MHC) Molecules: The Peptide Display System of Adaptive Immunity 194**
- Cytokines: Messenger Molecules of the Immune System 196**
- Overview of Lymphocyte Activation and Immune Responses 196**
- Display and Recognition of Antigens 196
 - Cell-Mediated Immunity: Activation of T Lymphocytes and Elimination of Intracellular Microbes 197
 - Humoral Immunity: Activation of B Lymphocytes and Elimination of Extracellular Microbes 198
 - Decline of Immune Responses and Immunologic Memory 199
- Hypersensitivity: Immunologically Mediated Tissue Injury 200**
- Classification of Hypersensitivity Reactions 200**
- Immediate (Type I) Hypersensitivity 201**
- Activation of T_H2 Cells and Production of IgE Antibody 202
 - Sensitization and Activation of Mast Cells 202
 - Mediators of Immediate Hypersensitivity 203
 - Late-Phase Reaction 204
 - Development of Allergies 204
 - Systemic Anaphylaxis 204
 - Local Immediate Hypersensitivity Reactions 205
- Antibody-Mediated (Type II) Hypersensitivity 205**
- Opsonization and Phagocytosis 205
 - Inflammation 205
 - Cellular Dysfunction 205
- Immune Complex–Mediated (Type III) Hypersensitivity 207**
- Systemic Immune Complex Disease 207
 - Local Immune Complex Disease (Arthus Reaction) 208
- T Cell–Mediated (Type IV) Hypersensitivity 208**
- CD4+ T Cell–Mediated Inflammation 208
 - CD8+ T Cell–Mediated Cytotoxicity 211
- Autoimmune Diseases 211**
- Immunologic Tolerance 212**
- Central Tolerance 212
 - Peripheral Tolerance 213
- Mechanisms of Autoimmunity: General Principles 214**
- Role of Susceptibility Genes 215
 - Role of Infections 216
- General Features of Autoimmune Diseases 217**
- Systemic Lupus Erythematosus (SLE) 218**
- Spectrum of Autoantibodies in SLE 218**
- Etiology and Pathogenesis of SLE 219
 - Drug-Induced Lupus Erythematosus 226
- Rheumatoid Arthritis 226**
- Sjögren Syndrome 226**
- Etiology and Pathogenesis 226
- Systemic Sclerosis (Scleroderma) 228**
- Etiology and Pathogenesis 228
- Inflammatory Myopathies 231**
- Mixed Connective Tissue Disease 231**
- Polyarteritis Nodosa and Other Vasculitides 231**
- IgG4-Related Disease 231**
- Rejection of Tissue Transplants 231**
- Mechanisms of Recognition and Rejection of Allografts 231**
- Recognition of Graft Alloantigens by T and B Lymphocytes 231
 - T Cell–Mediated Reactions 233
 - Antibody-Mediated Reactions 233
- Rejection of Kidney Grafts 233**
- Methods of Increasing Graft Survival 234
- Transplantation of Other Solid Organs 236**
- Transplantation of Hematopoietic Cells 236**
- Immunodeficiency Syndromes 237**
- Primary Immunodeficiencies 237**
- Defects in Innate Immunity 237**
- Defects in Leukocyte Function 237
 - Deficiencies Affecting the Complement System 238
- Defects in Adaptive Immunity 238**
- Defects in Lymphocyte Maturation 238**
- Severe Combined Immunodeficiency 239
 - X-Linked Agammaglobulinemia (Bruton Agammaglobulinemia) 240
 - DiGeorge Syndrome (Thymic Hypoplasia) 241
 - Other Defects in Lymphocyte Maturation 241
- Defects in Lymphocyte Activation and Function 241**
- Hyper-IgM Syndrome 241
 - Common Variable Immunodeficiency 241
 - Isolated IgA Deficiency 242
 - X-Linked Lymphoproliferative Syndrome 242
 - Other Defects in Lymphocyte Activation 242
- Immunodeficiencies Associated with Systemic Diseases 242**
- Wiskott-Aldrich Syndrome 242
 - Ataxia Telangiectasia 242
- Secondary Immunodeficiencies 243**
